DETAILED ACTION

Claim Rejections - 35 USC § 103

1. Claims 5, 6, 10-13 and 17 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Rampel (US 3,660,170) in view of Himy et al. (US 4,192,908), for reasons as of record.

Double Patenting

2. Claims 5-13, 17 and 18 stand rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-4 of U.S. Patent No. 6,602,394 B2 in view of Brown (US 5,162,079), for reasons as of record.

Response to Arguments

3. Applicant's arguments filed 1 June 2007 have been fully considered but they are not persuasive.

Applicant argues that the references "do not disclose or suggest electroplating zinc alloys from an alkaline electroplating bath" since the primary reference, Rampel, "refers to battery cells and only mentions electroplating in passing (see Abstract)". Rampel does disclose electroplating zinc alloys from an alkaline electroplating bath throughout the patent, i.e., in col. 2, lines 16-28 and in col. 3, lines 22-24.

Art Unit: 1753

As to the argument to the problems of phase separation and cyanide formation being not an issue for Rampel, first since the phase separation is not recited in the claim, it is irrelevant whether Rampel includes the feature or not; and secondly since Rampel discloses that the electrolytic zinc-containing solution is an electrolyte solution (read on the recited electroplating bath) in an electroplating of zinc, the cyanide formation is inherently in Rampel's teachings, the rejection stands.

As to the argument that Himy is not related to an alkaline zinc alloy electroplating baths and methods using them and providing them, first one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). And secondly, since Rampel discloses that the electrolytic zinc-containing solution may be the electrolyte in a battery cell or may be the electrolyte in electroplating of zinc solution and since Himy teaches the provision of an ion-exchange membrane in a cell containing electrolytic-zinc containing electrolyte, the rejections stands.

As to the argument to the rejection of claims under obviousness-type double patenting, since there is no terminal disclaimer being filed, the rejection stands.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
